FINORA | PORTFOLIO-WIDE CREDIT RISK WATCHLIST

HIGH RISK — LONDON BUSINESS PARK

Risk Indicators

DSCR: 0.92x | LTV: 85.00% | Annual NOI: $600,000

Loan Maturity: March 31, 2027

KEY FINDING

London Business Park generates insufficient net operating income to cover its scheduled annual debt service. Its relatively high leverage and approaching loan maturity warrant further investigation.

RECOMMENDED MANAGEMENT ACTION

Prioritize a review of cash reserves, tenant lease expirations, updated property valuations, and refinancing options.

ESG & OPERATIONAL INTELLIGENCE

London Business Park • Hypothetical Investment & Improvement Scenarios • USD

FINORA | Executive Decision Insight

London Business Park's stressed DSCR improves from 0.71x to 0.74x through combined ESG and operational initiatives. However, the improvement remains insufficient to reach the illustrative 1.25x coverage target.

The ESG investment generates positive NPV at an 8% discount rate but negative NPV at 10%, highlighting sensitivity to the required return.

Recommendation: Evaluate investment economics, additional operating improvements, and refinancing alternatives before committing capital.
